IMPORTANTCE OF A SEPTIC INSPECTION

WHAT IS A SEPTIC INSPECTION ?

Our technicians thoroughly check the function of a septic tank and leach field to ensure proper working order. This includes pumping out the tank and performing a hydro test on the leach field. An official Septic Report will be sent to the customer with any recommended repairs.

INSPECTION COMPLETED
BY LICENSED SEPTIC
INSTALLERS

Septic Tank Pumping

We remove septage from your septic tank to help keep your system running smoothly. For your piece of mind, before and after photos are provided.

Locate & Excavate

Our licensed and certified technicians are able to locate any septic tank. Additionally, we proudly offer a **FLAT RATE DIG FEE** to excavate your septic lid. Doesn't matter how deep.

OUR SERVICES

Riser Installation

Have professionally installed risers added to your septic tank. Lid included. **NO MORE DIGGING!**

Leach Field Repair

We will repair broken/clogged leach field lines, revitalizing your existing system with our exploratory dig.

Septic System Mapping

A process of visually representing the layout of a septic system, so you can add pools, driveways or additions, without compromising your system.

GENERAL MAINTENANCE

On average, septic tanks should be pumped out every **3-5 years**.

Take care of your septic system by **NOT** flushing these products:

- Wipes (even the 'flushable' wipes are bad for your septic system)
- Feminine Hygiene Products
- Plastics/Condoms

Be sure to minimize and avoid putting grease down your drains.
